                                                                                                                                                                                                                                                                                                                                     requests: clonerequest/sampler.ac.uk
On Feb 5, 2001 this sequence version replaced gi:12214260.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence has been finished according to sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated repeat sequence elements. Where the sequence is
ambiguous, there is an annotation using the 'unsure' feature key.
The following abbreviations are used to associate primary accession
numbers given in the feature table with their source databases:
Em; EmBL; Swy. SWISSPROT; Tr; TREMBL; Wp: WORMPEP; Information
on the WORMPEP database can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
Group. Further information can be found at
http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
was generated from part of bacterial clone contigs of human
chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
Group. Further information can be found at

NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_name: /SIDS8/gcgdata/geneseq/geneseqn/NA2000.DAT:AAZ46827
CC polynucleotides encoding the proteins. The polypeptides are useful for cc modulating the expression of human RNA binding proteins (RNABP) which cc play a role in cancer, immune disorders and developmental disorders. CC Disorders associated with a decrease of RNABP include: cancers such as cc adenocarcinoma, leukemia, lymphoma, melanoma, myeloma, sarcoma, cc teratocarcinoma, and, in particular, cancers of the adrenal gland, cc bladder, bone, bone marrow, brain, breast, cervix, gall bladder, ganglia, cc gastrointestinal tract, heart, kidney, liver, lung, muscle, ovary, cc pancreas, parathyroid, penis, prostate, salivary glands, skin, spleen, cc testis, thymus, thyroid, and uterus, immune disorders such as acquired communodeficiency syndrome (AIDS), Addison's disease, adult respiratory cc distress syndrome, allergies, ankylosing spondylitis, amylodosis, cc anemia, asthma, atherosclerosis, autoimmune hemolytic anemia, autoimmune cthyroiditis, bronchitis, cholecystitis, contact dermatitis, crohn's cc disease, atopic dermatitis, dermatomyositis, diabetes mellitus, cc emphysema, episodic lymphopenia with lymphocytotoxins, erythroblastosis cc emphysema, episodic lymphopenia with lymphocytotoxins, erythroblastosis condpasture's syndrome, gout, Graves' disease, Hashimoto's thyroiditis, hyporesis, pancreatitis, polympositis, psoriasis, cc myasthenia gravis, myocardial or perioardial inflammation, customic, sundrome, rheumatoid arthritis, sclaroderma, Sjogren's customic, arabhylavis excetemic lymphoperators customic, suctomic, su
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    disorders and developmental disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Isolated and purified polynucleotide for modulating the human RNA binding proteins which play a role in cancer,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel nucleic acids (I; designated LOBO (long bones)) encoding proteins influencing bone development in mammals. The proteins of the invention reduce and/or inactivate bone extension (i.e. development), with exception of the skull and have osteopathic activity. The nucleic acid molecules, proteins and antibodies can be used in diagnostic or pharmaceutical compounds e.g. for gene therapy. The methods and nucleic acid molecules, etc. are useful for production of transgenic animals, especially a transgenic mouse for the study of diseases associated with bone development, e.g. spondyloepiphysal dysplasia and achondroplasia. This sequence encodes a human LOBO protein described
                                                                                                                                                                                                                                                                                                                                                                                                          Bordetella pertussis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         pertussis filamentous haemagglutinin (FHA). Fragment 7 includes the RCD tripeptide that corresponds to amino acid residues 1097-1099 of FHA, and a carbohydrate recognition site corresponding to amino acid residues 1141-1279 of FHA. Truncated FHAs (see AAM6595) which delete the RGD region can be produced genetically and are useful as vaccines against whooping cough. The invention also provides peptides and antibodies which inhibit the reaction between the RGD tripeptide of FHA and the integrin receptors of endothelial cells and their utility as therapeutic agents, as well as a method of increasing the permeability of the blood-brain barrier using an

FHA is a non-fimbrial surface associated protein.

As there are four regions in FHA with sequence similarity to three regions in Factor X, some antibodies to these four regions cross-react with Factor X, and vice versa. The specification describes FHA peptides which interact with leukocytes or with blood vessel endothelial cells, thereby inhibiting the migration of leukocytes from the blood steam into inflamed tissue. FHA peptides competitively inhibit binding of Factor X and C3bi to leukocytes. Specifically, the peptides inhibit the reaction between the RGD tripeptide of FHA and the integrin receptors of endothelial cells. The FHA peptides (and antibodies to them) dampen inflammation during the course of therapy with antibiotics and are therefore useful in the treatment of infections e.g. meningitis, septic arthritis, and endophathalmitis, and inflammation arising from autoimmune

The specification also describes an immunogenic composition comprising a polypeptide portion of Bordetella pertussis filamentous haemagglutinin (PHA) containing no RGD region or containing an amino acid sequence altered in the RGD region, where the polypeptide portion elicits antibodies which do not cross-react with cerebral endothelial cells. The peptides and methods are useful for reducing inflammation during the course of antibiotic therapy of infectious diseases such as meningitis, septic arthitis, and endophathalmitis. The present sequence encodes fragment 7 of the FHA protein of

The CC composition comprises (I) and an antibody to FHA (filamentous hemagylutinin) which binds to endothelial cells in brain blood vessels, CC increasing permeability. FHA contains polypeptide regions with binding CC properties similar to those of complement C3bi, factor X and integrin CC receptor CR3, and some anti-FHA antibodies are competitive inhibitors CC of these materials, i.e. they reduce leukocyte migration or bacterial adhesion. The compositions are used to improve delivery of (I) to the brain, e.g. where (I) is used to treat brain cancer, acquired immune CC brain, e.g. where (I) is used to treat brain cancer's diseases or other neurological diseases. Other antibodies directed against particular CC regions of FHA are used to treat inflammation (caused by microbial CC regions of FHA are used to treat inflammation (caused by microbial CC regions of FHA are used to treat inflammation of Bordetella CC represents a FHA fragment 7 encoding gene.

                                                                                                                                                           This sequence represents the filamentous haemagglutinin gene, fhab, from CC Bordetella pertussis. Bordetella pertussis is a small Gram negative CC bacillus found only in humans and which causes whooping cough (pertussis) in children. Filamentous haemagglutinin (FHA) is a 368 kD surface-CC associated protein which is thought to be one of the most important CC factors in mediating the adhesion of the bacterium to a eukaryotic (human) cell. FHA also stimulates an immune response in humans following CC disease, and has been shown to act as an immune products, are used for CC animal model. The FHA gene, or its expression products, are used for CC enimal model. The FHA gene, or its expression products, are used for CC prevention or treatment of pertussis, particularly in vaccines. It may CC pertussis or other organisms. Fragments of the gene may be used as CC diagnostic hybridisation probes or as antisense modulators to reduce the CC used in immunoassays to detect anti-FHA antibodies, and to raise CC antibodies for the diagnosis, prevention of treatment of whooping cough.

This sequence encodes a human protein kinase C inhibitor (designated IPKC-1) initially identified among the partial CDNAs (Incyte clones shown in AAT76789-93) from a THP-1 library (THPIPEB01). IPKC may be useful for diminishing multiple drug resistance in cancer chemotherapy, for treating melanomas or other cancers, for treating autoimmune diseas

The relative GC content of the ORF is 67.5%. The DNA and recombinant peptides produced from it are useful diagnostically and therapeutically against pertussis. Dosage is pref. 25-75 microg/kg (single dose)
                                                                                                                      DNA encoding protein kinase C inhibitor polypeptide - useful diminishing multiple drug resistance in cancer chemotherapy

IPKC and compositions containing IPKC are useful for treating diseases and conditions associated with protein kinase C, such as multiple drug resistance, cancer, especially lymphoma, intestinal and breast cancer, memory disorders, as observed in sufferers of Alzheimer's disease, and auto-immune disorders such as rheumatoid arthritis, multiple sclerosis and myasthesia gravis. IPKC is more selective in its mode of inhibition, and has less risks associated with toxicity compared with
Detecting polynucleotides encoding protein kinase C inhibitor

The transcription factors isolated are Pv-Seed factor-1 (ROM1) and Vicilin-box binding protein-1 (ROM2). These factors bind to 7S-globulin (b-phaseolin) or lectin (PHA-L) promoters. The transcription factor gene is useful for enhancing or reducing expression of seed storage protein, lectin or oil-protein genes in dicot seed crops. The present sequence represents the nucleotide sequence of bZIP2 (basic leucine zipper) cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel transcription factor gene which encodes transcription factor protein that targets promoters of genes encoding seed storage protein useful for modulating seed storage protein expression in dicot
